

Power & Water

ΕΓΙΟΝΟ | ΗΛΔΡΟΚ

**COLLABORATE.
INNOVATE.**

Power & Water and **Eliquo Hydrok** have partnered to develop a new cutting-edge combined solution for low-level P removal targeting **small rural sites with tight P consents**.

The plant combines the established and proven technologies of **Eliquo Hydrok's Mecana tertiary filtration system** and **Power and Water's Soneco® electro coagulation system**.

Separately, we are pioneers of world-leading technologies, but **together**, we can **obtain new heights not achievable in isolation**.

Only by combining technologies, sharing information and promoting one another's success' can we chart a new, more **efficient**, more **sustainable** course for the future.

We propose a collaborative project between us all to prove the power, speed and efficiency of working together and sharing all findings; **all Water Companies are invited to participate** in demonstrating to the Water Industry the power of combined co-operation. **For more details and to join in this collaboration, please contact us.**
